ADMIN PORTAL

- ☐ Forgot pw doesn't work
- ☐ Some users didn't receive a sign up verification email.
- ☐ PW should have another field to re enter the password for confirmation that it matches the first entry.
- ☐ The login is a bit delayed for ~5 secs (not sure if it is because of the Lambda or cold starts)
- ☐ Changing the year in the time usage field on the dashboard to 2023 isn't possible. Even though it's not a use case for now it will become one next year so we should ensure that works. Changing the time usage between 12 months, 30 days and 7 days doesn't change anything.
- ☐ On the dashboard in the uploaded files in the bottom the file is not delectable. Instead there should be a list of files uploaded.
- ☐ Side bar with total prompts, total likes and dislikes should be displayed with 0 for a fresh user. Same for uploaded files. Also it doesn't let me delete the file there. Time spent should be at 0 if a new user is in the dashboard. All these stats should be real time data & real uploaded files by the students – all from the Belto Doc.
- ☐ Recurring Lecture creation takes a long time.
- ☐ Adding a lecture in the Student & Management Tab returns a 404 page not found error.
- ☐ Deleting lectures is not possible
- ☐ Copy and paste restrictions via the checkbox doesn't work on any tab (general settings, class or lecture)
- ☐ For all tabs: if there are mandatory fields but they aren't filled out and the user tries to save them, the not field out / wrongfully populated field should be marked up so the user knows what to fix.
- ☐ Ai preferences → don't seem to apply to the corresponding lecture. System prompt editing doesn't work. Adding approved websites doesn't work. Saving/Trying to test the settings doesn't give you a response with the according settings. (This chat also needs the PDF/Docx reading api) – all usage limits, pre/post processing rules and Ai behavior rules don't seem to apply. — TEMPERATURE IS 0-2… include a description of what temperature/(and the other ai preferences) indicate.
- ☐ Trying out space at the bottom of the AI preferences doesn't give a response with the ai preferences set.
- ☐ Stats/ Sentiment analysis does not show any feedback/analysis from the Belto Doc users for that class.
- ☐ All general settings don't seem to work.
- ☐ Exporting all data doesn't work.
- ☐ General settings will need a save button

If you say these last 4 pointers work, could you show us? Maybe we are testing wrong.

☐ Are archived/deleted classes stored in a bin or logs or anywhere?

☐ Overall, the performance seems slow. Is there a way to increase speed for a smoother feeling when opening any tab? (Saving/Reloading/Generating tabs in general seems very slow.)

☐ Login with Google doesn't work

☐ Enrollment Code / URL should be unique & generated so the students can join the class.

☐ Uploading PDFs/Docs seems to work sometimes and sometimes not. For example when creating the recurring classes it doesn't work but inside each lecture individually it does work. However, the contents from the uploaded files are not used within the chat on the user end.

☐ In Ai preferences should be a button to disable collaboration.

☐ Student Analysis on the lecture management tab doesn't return any stats. (they are just 0 for all even though we did use the Belto doc a lot)

☐ Removing students from a class doesn't work.

☐ When clicking on an upcoming lecture that was created in a second batch of recurring lectures it sends you to a different list of lectures which is kind of tricky to explain. However there is an add lecture button that creates another lecture. Instead the user should be directed directly to the lecture where the students should be listed with their stats and the user shouldnt be able to add a lecture. If this is too complicated we can just send the user to the Lecture and Student Management Tab.

☐ Currently the class time frame looks like this: Class Time Frame: 2025-01-06**T00:00:00.000Z** - 2025-02-28**T00:00:00.000Z**
→ can we remove the bold part so it looks a little more appealing?

BELTO DOC

- ☐ Reset pw doesn't work even if email exists.
- ☐ PW should have another field to re enter the password for confirmation that it matches the first entry.
- ☐ Verification mail should come from info@limex.world (outlook account → which info do you need for that?)
- ☐ Continuing with google is not responsive on the register page and returns an error on the login page.
- ☐ Receiving email for the verification to register takes a long time (10min+) for some people (is that maybe because their internet is bad or is there an underlying reason?)
- ☐ After joining classes, it takes ~5 sec to load the classes in the sidebar.
- ☐ Some classes do not let me click on the lectures so I can't start a chat. (it still persists for class 3,4,5…) That also happens for lectures that are added in a second round of creating recurring lectures within that same class.
- ☐ Classes load very long sometimes in the side bar
- ☐ Chat doesn't seem to scroll down to the bottom anymore.
- ☐ Student should be able to leave a class
- ☐ AttachedPDF/Docx don't seem to be readable. Is our API integrated?
- ☑ ~~Chat history is not remembered throughout the prompts~~
- ☐ Collaboration feature doesn't seem to be "real time" as the user has to reload the page to see changes. Right now updates are shown very delayed.
- ☐ Collaboration should only be possible for email in the same class.
- ☐ Students can't leave a class.
- ☐ The Info button at the end of the response shows incorrect values (Total tokens/prompt tokens/completion tokens show 0 even though there is a response.)
- ☑ ~~It would be very helpful if codeblocks, lists or similar would have a visual representation in the response.~~
- ☐ Sometimes the name at the bottom left of the side bar and in the chat is from another user.
- ☐ Even if a class is archived in the admin portal, it is still visible in the side bar of the belto doc.
- ☐ CANNOT LOAD A SESSION OR ENTER THE TEXT EDITOR WITHOUT PROMPTING
- ☐ Is there a hardcoded token cutoff? Because long essays are not generated without setting any Ai preferences. (when we curl our server we get the full response)
- ☐ Sometimes the chat history just loads for a long time and then the page has to be reloaded for it to work or the user has to click on the lecture again.
